ATS Match Score for "Full Stack Development Faculty"

Your resume was scanned against the Job Description for a Full Stack Development Faculty role at Millennium Software Solutions.

11%

This score indicates a low match percentage, primarily due to significant discrepancies in required experience, education level, and key technical skills.

ATS Analysis

Strengths Identified:

- **Python Proficiency:** Your resume clearly lists Python in Technical Skills and demonstrates its application in projects ("WhatsApp Messages Automation Using Python").
- **Data Structures & Algorithms:** You have a certification in "Data Structures and Algorithms Using Python", which is a direct keyword match for a core requirement of the JD.
- **MongoDB Knowledge:** A certification in "Introduction to MongoDB" is a direct match for the NoSQL database requirement.
- **Project Experience:** Your projects demonstrate initiative and application of technical skills, particularly with Deep Learning and Python automation.
- **Continuous Learning:** Multiple certifications from 2024-2025 highlight a commitment to professional growth.

Areas for Improvement / Missing Keywords:

The job description is for an experienced "Full Stack Development Faculty" requiring 3-5 years of industry experience and proficiency in *both* Python and Java full stack development. Your resume is currently geared towards an entry-level student, leading to many mismatches.

1. **Experience & Education Mismatch:** The JD requires a Bachelor's/Master's degree and 3-5 years of industry experience. Your resume indicates you are "2021-Present" for B.Tech and your career objective is for an "entry-level opportunity." This is the most critical mismatch.
2. **Missing Java Expertise:** The JD explicitly requires proficiency in Java full stack development (Spring Boot, Hibernate). Java is entirely absent from your resume.
3. **Front-end Technologies:** Key front-end skills like HTML, CSS, JavaScript, React, and Angular are not mentioned.
4. **Python Back-end Frameworks:** Specific Python frameworks like Django and Flask are required but not listed.
5. **Database (SQL):** SQL databases (MySQL/PostgreSQL) are crucial for full-stack roles but are not mentioned.
6. **API Development:** RESTful APIs are a requirement and not explicitly highlighted.
7. **Version Control:** Git is a standard development tool and is missing.
8. **Development Tools:** Specific IDEs like VS Code, IntelliJ IDEA, PyCharm are mentioned in the JD but absent from your skills.
9. **Teaching Experience:** "Prior teaching or mentoring experience is preferred" is a key aspect of a faculty role, which is not reflected.

Recommendations for VARAHALA SUMITH:

To improve your ATS score and suitability for such a role, consider the following:

1. **Target Role Alignment:** This JD is for an experienced faculty member. Your current resume is suited for an entry-level software development role. You need to align your resume to the specific type and seniority of the job you are applying for.
2. **Gain Relevant Experience:** Focus on acquiring 3-5 years of full-stack development experience, specifically incorporating Java and Python full-stack technologies.
3. **Complete Education:** Ensure your degree is completed before applying for roles requiring a degree.
4. **Acquire Missing Technical Skills:**
    - **Java:** Invest time in learning Java, Spring Boot, and Hibernate.
    - **Front-end:** Gain proficiency in HTML, CSS, JavaScript, and at least one modern framework (React or Angular).
    - **Python Frameworks:** Learn Django and/or Flask for back-end development.
    - **Databases:** Learn SQL (e.g., MySQL, PostgreSQL).
    - **Tools:** Get hands-on experience with Git, RESTful API development, and common IDEs (VS Code, PyCharm, IntelliJ IDEA).
5. **Update Career Objective:** Tailor your objective for each specific role. For an entry-level role, it's good, but for an experienced faculty role, it's misaligned.
6. **Enhance Project Descriptions:**
    - **Deep Learning Project:** * *Suggested Improvement:* "Developed a deep learning-based land cover classification system using Convolutional Neural Networks (CNNs) for environmental monitoring and disaster management. Implemented a graphical user interface (GUI) to simplify complex tasks such as dataset upload, image preprocessing, model training, and prediction. Achieved an accuracy of **60-70%** in classifying satellite images into natural disaster categories (earthquake, wildfire, cyclone, flood), making the tool accessible and effective for users with minimal technical expertise."
    - **WhatsApp Automation Project:** * *Suggested Improvement:* "Designed and implemented a WhatsApp message automation system using Python. Utilized libraries such as Twilio, pywhatkit, and Selenium, integrating with the WhatsApp Business API to enable personalized communication and support. Explored applications in customer support and marketing, demonstrating proficiency in Python and API integration."
7. **Add a "Development Tools" Section:** Explicitly list tools like Git, VS Code, PyCharm, etc., once you gain experience with them.
8. **Highlight Teaching/Mentoring (if applicable):** If you have any experience in tutoring, mentoring, or leading technical workshops/groups, include it to demonstrate teaching aptitude.
